Abstract

Covid-19 is an epidemic incident that is completely different from the epidemic the world has faced before. Even though all the leaders around the world try to claim that this is a natural pandemic that initiate from Wuhan, China in February 2020 and named it as China virus, but from the evidence this pandemic was called Covid-19 which means corona virus occur in 2019. This translated to the virus was recognized in year 2019, not 2020 and to be exact, it occurred in November 2019 in the international military stout event in Wuhan, China. Therefore the initiation of this pandemic by China in Wuhan is an erroneous accusation. This lead to the most suspicions cause of this virus is a biological weapon intended to release to the world by intend. But normally the people who release any biological weapon would be the people who have high knowledge in technology. In this incident, however, after the virus was successfully spread all over the world the agent responsible for the spreading of this virus have no vaccine or any idea of how to contain the virus.

Keywords: biological weapon, corona virus, Covid-19, pandemic
